

HIDDEN CABLE FIXED DEVICE

ABSTRACT OF THE DISCLOSURE

A hidden cable fixed device comprises a seat body, a movable handle provided in the seat body and sliding upward and
5 downward with two springs, and a coupling member lodged in the inner wall of the seat body and coupled to a longitudinal track at the side wall of the movable handle. The longitudinal track has two substantially V-shaped parts as a positioning section and a guiding section. The coupling member is adapted to guide
10 movement of the track of the movable handle and to selectively lock the movable handle between the extended operative position and the received non-operative position.
